**W. Peter Wuelfing and Royce W. Murray\*:** Electron Hopping through Films of Arenethiolate Monolayer-Protected Gold Clusters

Page 3142. In equation 5,  $\delta$  is average MPC center-to-center distance, not edge-to-edge distance as is the case for the  $\delta$  used in equation 4.

Page 3143. The rate constants  $k_{\text{ET}}$  in the right hand column of Table 2 ( $2.6 \times 10^8$ ,  $6.1 \times 10^9$ ,  $3.3 \times 10^{10}$ ,  $1.1 \times 10^{11} \text{ s}^{-1}$ ) were calculated incorrectly from equation 5. Using center-to-center  $\delta$  values they should be  $5 \times 10^7$ ,  $8 \times 10^8$ ,  $3 \times 10^9$ , and  $5 \times 10^9 \text{ s}^{-1}$ , respectively. In Figures 4 and 5, the absolute values of  $k_{\text{ET}}$  are also decreased by using center-to-center  $\delta$  in calculations from equation 5, but the relative values of  $k_{\text{ET}}$  in the figures, and the associated discussion of them on page 3142, are substantially unaffected.
