## Notice to Authors of Papers

(Revised June 2015)

### Contents (Click on the topic)

**Scope and Editorial Policy** – Manuscript Submission – ORCID – *Just Accepted* Manuscripts – ACS AuthorChoice Open Access – ASAP Publication – General Considerations – Related Work by Author – Peer Review – Revised Manuscripts – Galley Proofs – ACS Policies for E-prints and Reprints – Additions and Corrections – Retractions – **Preparation and Submission of Manuscripts** – Journal Publishing Agreement – **Patent Activities and Intellectual Property Issues** – Cover Letter – Submission | **Preparation of Manuscripts** – Title – Author List – Address – Professional Ethics – Conflict of Interest Disclosure – Funding Sources – Abstract – Text – Supporting Information Statement – Graphics – Illustrations – Color – Chemical Structures – Tables – Literature Cited – Citing by DOI – Nomenclature – Safety – Acknowledgment | **Supporting Information** – General Considerations – Submission | **File Preparation** – Currently Acceptable Word-Processing Packages

### Scope and Editorial Policy

*Industrial & Engineering Chemistry*, with variations in title and format, has been published since 1909 by the American Chemical Society. *Industrial & Engineering Chemistry Research* is a weekly publication that reports industrial and academic research in the broad fields of applied chemistry and chemical engineering with special focus on fundamentals, processes, and products. Papers may be based on work that is experimental or theoretical, mathematical or descriptive, chemical or physical. In addition to fundamental research (in such areas as thermodynamics, transport phenomena, chemical reaction kinetics and engineering, catalysis, bioengineering, separations, electrochemical engineering, interfacial phenomena, and materials), papers may deal with process design and development (for example, synthesis and design methods, systems analysis, process control, schemes for data correlation, modeling and scale-up procedures, etc.) and product research and development involving chemical and engineering aspects (for example, catalysts, nanomaterials, biomaterials, plastics, elastomers, pharmaceutical products, fibers, biofuels, adhesives, coatings, paper, membranes, lubricants, ceramics, aerosols, etc.). In addition to traditional subjects, papers dealing with new areas of science and technology that fit the broad scope and objectives of the journal are encouraged. (The category “General Research” should only be selected when none of the other categories are appropriate.)

Papers are accepted on the basis of judgment of their quality and probable lasting value and must contain a significant original contribution that is of interest to a general chemical engineering or applied chemistry readership. Papers that simply report data or calculations will be declined for publication. Clarity and conciseness of presentation are key considerations in the selection of papers. Figures and tables should be designed to facilitate rapid communication of information to the reader. Uninterrupted flow of the main ideas in the text can be facilitated by judicious use of appendixes and supporting information.

*Regular papers* are grouped in each issue by the Editors according to topical categories (Applied Chemistry; Bioengineering (e.g., biomolecular, biochemical, bioprocess, biological engineering); Kinetics, Catalysis, and Reaction Engineering; Materials and Interfaces; Process Design and Control; Separations; Thermodynamics, Transport, and Fluid Mechanics; or General Research).

**Authors should suggest at the time of submission which category best fits their paper.** In addition to regular full-length papers, other types of manuscripts are also published:

*Research Notes* are short reports (typically no longer than four (4) composed journal pages) that call attention to new ideas or data that are especially timely even though at an early stage of development. New laboratory apparatuses or procedures are especially appropriate. Research Notes are reviewed in the same way as regular papers.

*Correlations* are brief descriptions of the organization of existing information into useful and compact relationships where the mathematical framework may be empirical. (See the Editorial in the January 1992 issue (<http://dx.doi.org/10.1021/ie00001a600>) for further details about this category.)

*Correspondence* refers to comments concerning articles previously published in the journal. These may include corrections or addendums by the original authors or comments, reinterpretations, etc., by others. In the case of the latter, the original authors are given the opportunity to provide an appropriate rebuttal or addendum.

*Reviews* are welcomed in areas appropriate to the journal. Reviews should be timely and in-depth treatments that go considerably beyond the compilation of recent literature. They should set the chosen field in perspective and give the reader some critical guidance in the evaluation of the present state of the art or science, the planning of experiments, the interpretation of data, the design of chemical process systems, or the development of products. Acceptance is based on the same peer review system as that used for regular papers.

*Commentaries* may be submitted by invitation or unsolicited. They are intended to be a forum for experts to inform readers about their views on key issues, significant progress, or crucial problems that need to be solved in their field. (See the Editorial in the November 1999 issue (<http://dx.doi.org/10.1021/ie9904908>) for further details about Commentaries.)

Special sections or issues may be devoted to timely symposia or to blocks of invited or submitted papers on selected topics.

Special issues may contain papers that generally would not be suitable for regular issues.

## **Manuscript Submission**

Manuscripts should be submitted via the secure ACS Paragon Plus Web site (<http://paragonplus.acs.org/login>). Manuscripts should not be submitted to any Associate Editor or to the ACS offices in Washington, as this will delay both the formal receipt date and the review process. Manuscripts may not be submitted via fax or as e-mail attachments. Complete instructions for the submission of manuscripts and Supporting Information, including the platforms and word processing packages supported, are available on the ACS Paragon Plus Web site (<http://paragonplus.acs.org>). Be aware that, once a manuscript has been accepted in Paragon Plus, the author cannot modify the submitted documents. Any changes must be addressed through the Editorial Office.

Submission of a manuscript to *Ind. Eng. Chem. Res.* is contingent upon the agreement by all the authors that the work reported therein has not received prior publication and is not under consideration for publication elsewhere in any medium, including electronic journals and computer databases. This includes publicly accessible preprint sites. Authors should adhere to

the American Chemical Society's *Ethical Guidelines to Publication of Chemical Research* available at <http://pubs.acs.org/page/policy/ethics/index.html>.

The author will be asked to submit their manuscript in an editable format (Word, RTF, LaTeX, etc.), as well as a corresponding PDF file. To avoid delays in production, the content of both must match. For example, figure captions and tables, if present, should appear in both files; if they are present in the PDF but not the editable file, the Editorial Production office will have to contact the author to obtain matching files that both have the features in question.

## ORCID

All authors are encouraged to register for an ORCID iD, a unique researcher identifier. With this standard identifier, you can create a profile of your research activities to distinguish yourself from other researchers with similar names, and make it easier for your colleagues to find your publications. Learn more at <http://www.orcid.org>.

Authors and reviewers can add their ORCID iD to, or register for an ORCID iD from, their account in ACS Paragon Plus. Submitting authors have the option to provide existing ORCID iDs for coauthors during submission, but they cannot create new ORCID iDs for coauthors.

## Just Accepted Manuscripts

*Just Accepted* manuscripts are peer-reviewed, accepted manuscripts that are posted on the ACS Publications website prior to technical editing, formatting for publication, and author proofing usually within 30 minutes to 24 hours of acceptance by the Editorial Office. During the manuscript submission process, Authors can choose to have their manuscript posted online as a *Just Accepted* manuscript. To ensure rapid delivery of the accepted manuscript to the Web, Authors must adhere carefully to all requirements in the journal's Notice to Authors. For further information, please refer to the *Just Accepted* FAQ, accessible from <http://help.acs.org>. Note that publishing a manuscript as *Just Accepted* is not a means by which to comply with the [NIH Public Access Mandate](#). After a manuscript is technically edited and formatted, it will be removed from the "Just Accepted" Web site and published as an ASAP article.

## ACS AuthorChoice Open Access

[ACS AuthorChoice](#) options establish fee-based mechanisms for authors or their research funding agencies to sponsor the open availability of final published articles on the Web. *ACS AuthorChoice* offers authors a wide range of open access license options, such as Creative Commons licenses and provisions for immediate or 12-month embargoed open access, and includes [ACS Certified Deposit](#). Authors will find useful information about compliance with open access policies available [here](#) and FAQs [here](#). Corresponding authors who published with ACS during 2014 may have access to [ACS Author Rewards](#), a \$60M stimulus program ACS provided to help authors transition to new open access publishing models.

Authors must sign the Journals Publishing Agreement. Forms and complete instructions are available [here](#). After acceptance, authors will be presented with the opportunity to purchase an *ACS AuthorChoice* option, and authors who do so will be presented with the appropriate license at that time. For a review of all license options available, see [here](#). For questions or further assistance with *ACS AuthorChoice*, please reach out to [support@services.acs.org](mailto:support@services.acs.org).

## ASAP Publication

Manuscripts accepted for publication in ACS journals will be posted ASAP in the Web edition of the journal as soon as they are ready for publication (that is, when page proofs are corrected and all author concerns are resolved). Publication on the Web usually occurs within 1–4 working days of receipt of page proof corrections, and this can be anywhere from 2 to 11 weeks in advance of the cover date of the printed issue. Manuscripts assigned to a special issue often remain published ASAP for several months. The actual date on which an accepted paper is published on the Web is recorded on the Web version of the manuscript and on the bottom of the first page of the PDF version. **Once a manuscript appears on the Web, it is published.** Any errors of consequence detected after that point must be submitted as “Additions and Corrections” (see [below](#)).

## General Considerations

Authors should present their materials with the utmost conciseness consistent with clarity. Papers should be written in a style that addresses a wider audience than papers prepared for more specialized journals.

## Related Work by Author

When a reference concerning related work by the author is cited in the submitted manuscript and such work is not available to the reviewers because it is “in press” or has been submitted to this or other journals, it must be submitted with the manuscript for use by the reviewers and the Editors if it is relevant to the present manuscript. Reference material should be uploaded as a separate Supporting Information file and labeled as either “Other Files for Editor Only” or “Supporting Information for Review Only” at the time of submission. If only hardcopy is available, the author must convert it to an electronic file (e.g., PDF).

## Peer Review

The Editors generally seek the advice of experts about manuscripts; however, manuscripts considered by the Editors to be inappropriate for *Ind. Eng. Chem. Res.* will be declined after an internal Editorial review. Manuscripts most likely to be declined after Editorial review are those with English deficiencies, those lacking conclusions that are clearly significant and novel, and those with contributions that are judged unlikely to attract the interest of a general applied chemistry or chemical engineering readership. The recommendations of reviewers are advisory to the Editors, who accept full responsibility for decisions about manuscripts. Final responsibility for acceptance or declination rests with the Editor.

**Authors must suggest a minimum of six to eight persons competent to review the manuscript. Authors are asked to refrain from suggesting colleagues from their own institution(s).** Authors may also request that a certain person not be used as a reviewer. Such a request will generally be honored by the Editor handling the manuscript, unless the Editor feels that this individual’s opinion (in conjunction with the opinions of other reviewers) is vital in the evaluation of the manuscript.

Reviewers should give estimates of the scientific value of the work and indicate if the paper is of widespread interest to the broad and diverse readership, together with some basis for their opinion. They should indicate whether the writing is clear, concise, and relevant. Personal comments should be avoided.

## Revised Manuscripts

When a revision is requested, authors must submit the revised manuscript promptly. The revision deadlines for peer-reviewed manuscripts are as follows:

- Minor Revision: 30 days
- Major Revision: 45 days
- Reject & Resubmit: 90 days

A revised manuscript received after the given deadline will be handled as a new submission and will be given a new receipt date.

## Galley Proofs

All corresponding authors will receive e-mail notification of their galley proof availability via a secure Web site. Access to the galley proofs, the original manuscript, and reprint order forms are sent directly to the author who has been designated as the corresponding author.

Page proofs should be checked carefully against the manuscript (in particular, all tables, equations, and formulas), as this is not done by the Journal Publications office, and should be returned as soon as possible. No paper is released for printing until the author's changes have been made or the author's approval has been received. If a hardcopy of the proof is returned, all corrections, revisions, and additions must be entered on the proof; if changes are returned via the Web, all corrections, revisions, and additions must be listed with their location clearly identified. Authors who would prefer to e-mail their changes (rather than using the secure Web site) may do so to [acsproof@acs.org](mailto:acsproof@acs.org); however, the Web site should be the primary method of review and revision. Authors should not request that their page proofs be held for an extended period of time. Manuscripts for which page proofs are not returned in a timely manner will be withdrawn from publication.

## ACS Policies for E-prints and Reprints

Under the ACS Articles on Request policy

(<http://pubs.acs.org/page/policy/articlesonrequest/index.html>), the Society will provide (free of charge) to all contributing authors a unique URL within the ACS Web site that they may e-mail to colleagues or post on external Web sites. These author-directed links are designed to facilitate distribution of an author's published work to interested colleagues. The ACS Articles on Request policy allows 50 downloads within the first year after publication and unlimited access via the same author-directed links 12 months after publication. The ACS AuthorChoice option establishes a fee-based mechanism for authors or their research funding agencies to sponsor the open availability of their articles on the Web at the time of online publication. Under this policy, the ACS as copyright holder will enable unrestricted Web access to a contributing author's publication from the Society's Web site in exchange for a fixed payment from the sponsoring author. ACS AuthorChoice will also enable participating authors to post electronic copies of published articles on their own personal Web sites and institutional repositories for noncommercial scholarly purposes and allow immediate open access to an article as soon as it is published on the ACS Web site. For more details on ACS AuthorChoice, please visit <http://pubs.acs.org/page/policy/authorchoice/index.html>.

When authors are sent the proof of their paper, they will receive a link to a website where they

may order paper reprints. They may also call Cierant Corporation – 866-305-0111 from 9AM to 5PM EST. Reprints will be shipped within two weeks after the issue publication date. Neither the Editors nor the Washington ACS Office keeps a supply of reprints; requests for single copies of papers should be addressed to the corresponding author of the paper concerned.

## Additions and Corrections

Additions and Corrections may be used to address important issues or correct errors and omissions of consequence that arise after publication of an article. Additions and Corrections may be requested by the author(s) or initiated by the Editor after discussions with the corresponding author. Readers who detect errors of consequence in the work of others should contact the corresponding author of that work. All Additions and Corrections are subject to approval by the Editor, and minor corrections and additions will not be published. Additions and Corrections from authors should be submitted via the ACS Paragon Plus environment by the corresponding author for publication in the “Addition/Correction” section of the Journal. The corresponding author should obtain approval from all of the article coauthors prior to submitting an Addition and Correction, or provide evidence that such approval has been solicited. The Addition and Correction should include the original article title and author list, citation including DOI, and details of the correction. For proper formatting, see examples in a current issue of the Journal.

## Retractions

Articles may be retracted for scientific or ethical reasons. Articles that contain seriously flawed or erroneous data such that their findings and conclusions cannot be relied upon may be retracted in order to correct the scientific record. Retractions may be requested by the article author(s) or by the journal Editor(s), but are ultimately published at the discretion of the Editor. When an article is retracted, a notice of Retraction will be published containing information about the original article title, author list, and the reason for the Retraction. Retracted articles will be accompanied by the related Retraction notice and will be marked as “Retracted”. The originally published article will remain on the web except in extraordinary circumstances (e.g. where deemed legally necessary, or if the availability of the published content poses public health risks). The American Chemical Society follows guidance from the Committee on Publication Ethics (COPE) when considering retractions; for more information see: <http://publicationethics.org/>.

## Preparation and Submission of Manuscripts

### Journal Publishing Agreement

A properly completed and signed Journal Publishing Agreement must be submitted for each manuscript. ACS Paragon Plus provides an electronic version of the Agreement that will be available on the **My Authoring Activity** tab of the Corresponding Author's Home page once the manuscript has been assigned to an Editor. A PDF version of the Agreement is also available, but **Authors are strongly encouraged to use the electronic Journal Publishing Agreement**. If the PDF version is used, **all pages of the signed PDF Agreement must be submitted**. If the Corresponding Author cannot or should not complete either the electronic or PDF version for any reason, another Author should complete and sign the PDF version of the form. Forms and complete instructions are available at <http://pubs.acs.org/page/copyright/journals/index.html>.

## Patent Activities and Intellectual Property Issues

Authors are responsible for ensuring that all patent activities and intellectual property issues are satisfactorily resolved prior to first publication (Just Accepted, ASAP, or in issue). Acceptance and publication will not be delayed for pending or unresolved issues of this nature.

## Cover Letter

A cover letter must accompany the manuscript. The letter should provide the corresponding author's name, postal and e-mail addresses, and telephone and fax numbers. Unless different instructions are furnished in the cover letter, all Editorial correspondence concerning receipt, status, review, revision, and publication of manuscripts will be sent **only** to one person who has been assigned as the "corresponding author" during the evaluation period. The corresponding author is responsible for communicating the manuscript status to all coauthors of the paper. The cover letter should also list any graphics for which color is requested. Authors must suggest a minimum of six to eight persons competent to review their manuscript. A mechanism is provided for submitting an electronic cover letter, which should include the above elements. An acknowledgment letter will be sent to the corresponding author, and it will indicate the Associate Editor that has been selected by the Editor to handle the manuscript. The selection of appropriate reviewers is the prerogative of the Associate Editor handling the manuscript.

## Submission

Complete instructions and an overview of the electronic online submission process are available through the secure ACS Paragon Plus Web site <http://paragonplus.acs.org/>. Authors must also submit all revisions of manuscripts via the ACS Paragon Plus Environment (including the final revision). The Web submission site employs state-of-the-art security mechanisms to ensure that all electronically submitted papers are secure. These same security mechanisms are also utilized throughout the peer-review process, permitting access only to editors and reviewers who are assigned to a particular paper.

## Preparation of Manuscripts

All pages of the manuscript must be numbered consecutively, and all files must be saved and printed in U.S. Letter size format. Authors should consult recent issues of the Journal and *The ACS Style Guide*, 3rd ed.; American Chemical Society: Washington, DC, 2006 for further format guidance. (*The ACS Style Guide* is available at <http://pubs.acs.org/books/styleguide/>.)

Any author who is not fully fluent in idiomatic English is urged to obtain assistance with manuscript preparation from a fluent colleague or the ACS ChemWorx English Editing Service. Manuscripts with grammar or vocabulary deficiencies are handicapped during the scientific review process and may be returned to the author before peer review and/or before acceptance for rewriting in idiomatic English.

## Assistance with English Language Editing

Authors may want to have their manuscripts edited professionally before submission to improve clarity. The ACS ChemWorx English Editing Service can assist you in improving and polishing the language in your manuscript. You can learn more about the services offered, at <http://es.acschemworx.acs.org>.

## Title

The title should accurately, clearly, and concisely reflect the emphasis and content of the paper. The title must be brief and grammatically correct.

## Author List

Include in the byline all those who have made substantial contributions to the work. Use first names, initials, and surnames (e.g., John R. Smith). Do not use only initials with surnames (e.g., J. R. Smith) because this causes indexing and retrieval difficulties and interferes with unique identification of an author. Do not include professional or official titles or academic degrees. At least one author must be designated with an asterisk as the author to whom correspondence (regarding the published manuscript) should be addressed. It is the responsibility of the submitting author to ensure that the manuscript and any revisions have the full approval of all coauthors.

During manuscript submission, the submitting author must provide contact information (full name, email address, institutional affiliation and mailing address) for all of the co-authors. Because all of the author names are automatically imported into the electronic Journal Publishing Agreement, the names must be entered into ACS Paragon Plus in the same sequence as they appear on the first page of the manuscript. (Note that co-authors are not required to register in ACS Paragon Plus.) The author who submits the manuscript for publication accepts the responsibility of notifying all co-authors that the manuscript is being submitted. Deletion of an author after the manuscript has been submitted requires a confirming letter to the Editor-in-Chief from the author whose name is being deleted. For more information on ethical responsibilities of authors, see the [Ethical Guidelines to Publication of Chemical Research](#).

## Address

The affiliation(s) listed should be the institution(s) where the work was conducted. If the present address of an author differs from that at which the work was done, the current address should be given in a footnote. The e-mail address of the corresponding author should also be provided as the last entry in the address portion on the title page.

## Professional Ethics

In publishing only original research, ACS is committed to deterring plagiarism, including self-plagiarism. ACS Publications uses CrossCheck's iThenticate software to screen submitted manuscripts for similarity to published material. Note that your manuscript may be screened during the submission process. Further information about plagiarism can be found in Part B of the [Ethical Guidelines to Publication of Chemical Research](#).

## Conflict of Interest Disclosure

A statement describing any financial conflicts of interest or lack thereof is published with each manuscript. During the submission process, the corresponding author must provide this statement on behalf of all authors of the manuscript. The statement should describe all potential sources of bias, including affiliations, funding sources, and financial or management relationships, that may constitute conflicts of interest (please see the [ACS Ethical Guidelines \[http://pubs.acs.org/ethics\]](http://pubs.acs.org/ethics)). The statement will be published in the final article. If no conflict of interest is declared, the following statement will be published in the article: “The authors declare no competing financial interest.”

## Funding Sources

When submitting a manuscript to the Journal via ACS Paragon Plus, the submitting author is asked to identify the funding sources for the work presented in the manuscript. Identifying funding sources is optional during submission of an original manuscript. Funding source information is required when a revised manuscript is submitted.

## Abstract

Authors' abstracts are used directly for *Chemical Abstracts*. They should be a clear, concise (100-150 words) summary—informative rather than descriptive—giving the scope and purpose, methods or procedures, significant new results, and conclusions. **Do not include footnotes or numbered references in the Abstract; use the full citation, enclosed in square brackets.**

## Text

Assume the reader is not a novice in the field. Include only as much history as is needed to provide background for the particular material covered in your paper. Sectionalize the article and insert appropriate headings. Do not use footnotes in the text. Each page should be numbered.

## Supporting Information Statement

A brief statement in nonsentence format, listing the contents of material supplied as Supporting Information, should be included at the end of the manuscript (after the Acknowledgment and before the References). Consult a current issue of *Ind. Eng. Chem. Res.* for the proper wording of this statement. For instructions on what material should be provided as Supporting Information and on preparing it for publication, see the Supporting Information section below.

## Graphics

To facilitate the publication process, please submit manuscript graphics using the following guidelines:

1. The preferred submission procedure is to embed graphic files in a Word document. It may help to print the manuscript on a laser printer to ensure all artwork is clear and legible.
2. Additional acceptable file formats are: TIFF, PDF, EPS (vector artwork) or CDX (ChemDraw file). If submitting individual graphic files in addition to them being embedded in a Word document, ensure the files are named based on graphic function (i.e. Scheme 1, Figure 2, Chart 3), not the scientific name. Labeling of all figure parts should be present and the parts should be assembled into a single graphic.

- EPS files: Ensure that all fonts are converted to outlines or embedded in the graphic file. The document settings should be in RGB mode. **NOTE:** *While EPS files are accepted, the vector-based graphics will be rasterized for production.* Please see below for TIFF file production resolutions.
3. TIFF files (either embedded in a Word doc or submitted as individual files) should have the following resolution requirements:
- Black & White line art: 1200 dpi
  - Grayscale art (a monochromatic image containing shades of gray): 600 dpi
  - Color art (RGB color mode): 300 dpi
  - The RGB and resolution requirements are essential for producing high-quality graphics within the published manuscript. Graphics submitted in CMYK or at lower resolutions may be used, however, the colors may not be consistent and graphics of poor quality may not be able to be improved.
  - Most graphic programs provide an option for changing the resolution when you are saving the image. Best practice is to save the graphic file at the final resolution and size using the program used to create the graphic.
4. Graphics should be sized at the final production size when possible. Single column graphics are preferred and can be sized up to 240 points wide (3.33 in.). Double column graphics must be sized between 300 and 504 points (4.167 in. and 7 in.). All graphics have a maximum depth of 660 points (9.167 in.) including the caption (please allow 12 pts for each line of caption text).
- Consistently sizing letters and labels in graphics throughout your manuscript will help ensure consistent graphic presentation for publication.
5. For more information, please visit <http://pubs.acs.org/page/4authors/submission/index.html>.

## Illustrations

The quality of the illustrations printed in your paper depends on the quality of the originals provided by the author. Figures cannot be modified or enhanced by the journal production staff. Whenever possible, the graphics files furnished by authors electronically with revised submissions of accepted manuscripts are used in production of the Journal. Contrast is important. Use dark black ink. **Also, remove all color from graphics, except for those graphics that you would like to have considered for publication in color** (see Color section [below](#) for details).

Illustrations must fit a one- or two-column format on the journal page: For efficient use of journal space, single column illustrations are preferred.

For best results, submit illustrations in the actual size at which they should appear in the journal. Original illustrations that do not need to be reduced to fit a single or double column will yield the

best quality. Lettering should be no smaller than 4.5 points. (Helvetica or Arial type works well for lettering.) Lines should be no thinner than 0.5 point. Lettering and lines should be of uniform density.

If you submit artwork that must be reduced, use larger lettering and thicker lines so that, when reduced, the artwork meets the above-mentioned parameters.

Avoid using complex textures and shading to achieve a three dimensional effect. To show a pattern, choose a simple crosshatch design.

## Color

Color reproduction, if approved by the Editor, will be provided at no cost to the author. Color illustrations should only be submitted if essential for clarity of communication. The use of color should be restricted to figures, charts, schemes, and tables; color should not be used in figure captions (however, descriptions of color are permitted). A surcharge of \$100 per 100 reprints will be added to the standard cost of reprints.

## Chemical Structures

Structures should be produced with the use of a drawing program such as ChemDraw. Structure drawing preferences (preset in the ACS stylesheet in Chem-Draw) are as follows:

(1) As drawing settings select:

chain angle	120°
bond spacing	18% of width
fixed length	14.4 pt (0.508 cm, 0.2 in.)
bold width	2.0 pt (0.071 cm, 0.0278 in.)
line width	0.6 pt (0.021 cm, 0.0084 in.)
margin width	1.6 pt (0.056 cm, 0.0222 in.)
hash spacing	2.5 pt (0.088 cm, 0.0347 in.)

(2) As text settings select:

font	Arial/Helvetica
size	10 pt

(3) Under the preferences choose:

units	points
tolerances	5 pixels

(4) Under page setup choose:

Paper	US Letter
Scale	100%

Authors using other drawing packages should, in as far as possible, modify their program's parameters so that they reflect the above guidelines.

## Tables

Tables included in the text of papers should be short and limited to those needed by the average reader to understand the research reported. Such tables should not duplicate information included in the figures. Number tables in their order of mention in the text, by use of Arabic numbers. Long tables of data or other information that may be of value to a limited number of more-interested readers can be included as Supporting Information, as explained below.

## Literature Cited

References to the literature should be listed in a separate section numbered in one consecutive series, according to the order they appear in the text. If a reference is cited more than once in the text, use the same number each time. (Do not use "Anonymous".) References should be cited in the text by the number typed as unparenthesized superscripts, but these numbers should be enclosed in parentheses in the reference list following the text. Use *Chemical Abstracts Service Source Index* journal abbreviations, and refer to *The ACS Style Guide* (2006) (<http://pubs.acs.org/books/styleguide/>) for style. **Include the English titles for journal articles as well as original titles for books.** Literature citations should be arranged and punctuated as shown:

- (1) Kim, K.; Johnston, K. P. Molecular Interactions in Dilute Supercritical Fluid Solutions. *Ind. Eng. Chem. Res.* **1987**, 26, 1206.
- (2) Bird, R. B.; Stewart, W. E.; Lightfoot, E. N. *Transport Phenomena*; Wiley: New York, 1960.

The accuracy of the references is the responsibility of the author. Because subscribers to the Web edition of the journal are now able to click on the "CAS" tag following each reference to retrieve the corresponding CAS abstract, reference accuracy is critical.

## Citing by DOI

For work published online (*Just Accepted* or ASAP) and work submitted for publication (e.g., submitted; in press), the DOI should be furnished in addition to the standard bibliographic information. Authors are given instruction for citing work by DOI in an email communication when manuscript proofs are made available. A DOI is assigned to each manuscript and should be in the form <http://dx.doi.org/10.1021/om000000a>. DOI is an accepted form of citation before and after the article appears in an issue.

## Nomenclature

Nomenclature should conform to current American usage. Insofar as possible, authors should use systematic names similar to those used by the Chemical Abstracts Service or IUPAC. *Chemical Abstracts (CA)* nomenclature rules are described in Appendix IV of the *Chemical Abstracts Index Guide*. For CA nomenclature advice, consult the Manager of Nomenclature Services, Chemical Abstracts Service, P.O. Box 3012, Columbus, OH 43210-0012. A name generation service is available for a fee through CAS Client Services, 2540 Olentangy River Road, P.O. Box 3343, Columbus, OH 43210-0334. Telephone: (614) 447-3870. Telefax: (614) 447-3747. E-mail: [answers@cas.org](mailto:answers@cas.org).

Use consistent units of measurement compatible with the SI system and give dimensions for all terms. If the nomenclature is specialized, include a Nomenclature section at the end of the paper, giving definitions and dimensions for all terms. Write out names of special symbols in the margin of the manuscript at the point of first use. Identify typed letters that could be misinterpreted, i.e., oh and zero, ell and one, etc.

Format all equations and formulas clearly, and number equations consecutively by use of Arabic numbers. Place superscripts and subscripts accurately. Structural formulas should be submitted as drawings or as laser prints using a drawing package such as ChemDraw.

## **Safety**

Authors are encouraged to call attention to safety considerations such as explosive tendencies, special precautionary handling procedures, toxicity, and special waste disposal procedures.

## **Acknowledgment**

Include, in an acknowledgment section at the end of the text, only such credits as are essential.

## ***Supporting Information***

### **General Considerations**

Material that is not needed for reading the paper but which should be available to document the experiments or calculations for future researchers should be put into the Supporting Information. This material may include tables, illustrations, derivations, experimental details, etc., that would only be of interest to a small number of readers. This section may also include additional material or discussion that is primarily of interest to specialized readers. Authors are encouraged to make use of Supporting Information in the interest of shorter articles, not only to save space but also to create more focused presentations.

Supporting Information should be formatted to fit within a minimum number of pages, e.g., text and tabular material should be well-organized and graphics should be reduced to a size that still allows clear viewing on the Web. The page size should be (U.S. Letter) 22 cm × 28 cm, and the readable material should be aligned parallel with the 22-cm dimension wherever possible.

All pages should be numbered consecutively starting with page S1. Material deposited as Supporting Information is considered to be part of the publication and should not be submitted for republication as part of a future paper. All Supporting Information will be made available free of charge on the Web.

### **Submission**

Supporting Information must be provided at the same time that the manuscript is submitted. A list of acceptable electronic file types for Supporting Information is given on the ACS Paragon Plus Web site (<http://paragonplus.acs.org/>). All Supporting Information files of the same type should be submitted as a single file (rather than submitting a series of files containing individual images or structures). For example, all Supporting Information available as PDF files should be contained in one PDF file, if possible. Where appropriate, Supporting Information should be consolidated into a single word processing file with graphics inserted using the Article template.

**DO NOT UPLOAD FIGURES AND TABLES THAT ARE TO BE PUBLISHED IN THE ARTICLE INTO THE SUPPORTING INFORMATION FILE. CONVERSELY, SUBMIT SUPPORTING INFORMATION AS A SEPARATE FILE; IT SHOULD NOT BE INCLUDED WITHIN THE MAIN CONTENT OF THE MANUSCRIPT.**

### ***File Preparation***

The document mode or its equivalent in the word-processing program should be used; i.e., files should not be saved in “Text Only” (ASCII) mode. If a non-Western version of word-processing software is used to prepare the manuscript, the file should be saved in rich-text format (RTF). “Hard returns” should only be used to end headings and paragraphs, not to break lines of text. Spaces should not be inserted before punctuation.

All characters must be correctly represented throughout the manuscript: for example, 1 (one) and l (ell), 0 (zero) and O (oh), x (ex) and × (times sign). The “Symbol” font for all Greek letters and math symbols should be used. The conversion program used in the journal production office will faithfully translate any errors present in a file; therefore, the final version must be checked carefully for consistent notation and correct spelling. The file must be checked with an up-to-date virus detection program. The presence of a virus will delay the publication of the manuscript.

All text and tabular material should be in one file. Use “Times” and “Symbol” fonts. Other fonts, particularly those that do not come bundled with the system software, may not translate properly. Ensure that all special characters (e.g., Greek characters, math symbols, etc.) are present in the body of the text as characters and not as graphic representations. Consult the documentation for the specific software package being used on how to detect the presence of graphics in the files and replace them with the appropriate text characters. Tables may be created using a word-processor’s text mode or table format feature. The table format feature is preferred. Ensure each data entry is in its own table cell. If the text mode is used, separate columns with a single tab and use a line feed (return) at the end of each row.

Authors may provide graphics either integrated with the text and tabular material or in electronic form as separate files (one graphic per file) in TIFF. Consult the documentation in your graphics application for more information on how to save your files in this format. The filename for each graphic should be descriptive of the content graphic, for example, figure1 for Figure 1, scheme1 for Scheme 1, etc.

### **Currently Acceptable Word-Processing Packages**

The ACS Paragon Plus Web site gives a list of acceptable word processing formats and packages (<http://paragonplus.acs.org>).

When submitting manuscripts, please conform to these detailed instructions; the most current version is available via the Web at <http://pubs.acs.org/page/iecred/submission/authors.html>.
